

Superdri® Handcart Filter Systems

MXP5E Series. Removes Dissolved Water from Transformer Oil Without Heat and Vacuum.

FEATURES

- Flow control bypass
- Filter bypass
- Digital flowmeter/totalizer
- Sample taps
- Portable handcart mounted

DESCRIPTION

The **Parker Velcon MXP5E** comes with all the features needed for proper use of Parker Velcon Superdri® Cartridges for dissolved water removal from transformer oil. Parallel flow through the two filter housings assures the proper flow rate through each SD-718 Superdri® cartridge. The unit is also valved so that series flow is possible for non-dissolved water oil handling applications, such as removal of dirt and free water. Use FO filter cartridges in the first housing to remove dirt particles. An Aquacon® cartridge in the second stage removes free water.

The flowmeter/totalizer feature allows the user to calculate the approximate lifetime of the Superdri® cartridges without an on-line moisture monitor. For dissolved water removal from transformer oil, the MXP5E is an economical alternative to more costly heat and vacuum systems.

APPLICATIONS

The MXP5E-1 Portable Filter can be used for:

- Network transformer filling
- Drying wet LTC Compartments
- Vacuum-type LTC's
- Drum transferring operations
- Dissolved water removal capability for critical oil quality requirements
